

# OLD CLEAN BRICKS

WITH CHARACTER,  
HISTORY AND CARE  
- IN EVERY BRICK

## OLD BRICKS WITH CHARACTER, HISTORY AND CARE

Past and present embodied in the same brick. Masonary bricks have a natural patina perfect for raw, rustic surfacings for facades, floors and walls. History is preserved and the benefits to the environment are substantial. 2000 old bricks save 1 ton of CO2 from being emitted into the environment.

Old Clean Bricks is the only company to have created a solution to cleaning old bricks responsibly. Using our patented technology, Old Clean Bricks can clean 5000 to 6000 bricks an hour - helping to reduce environmental impact for the future.

## FROM COW SHED TO CASTLE LIVING

Hindsgavl Slot chose old bricks in its conversion of the castle's old cow shed. The 23 new rooms are all characterised by their special patina, reminiscent of castle living and simple in expression.

*"We had never worked with old bricks before. The brick layers were a bit sceptical to start with as these bricks need more sorting than newly produced ones. But it soon became clear that the building would inherit a character impossible to achieve with new bricks. The beauty of the bricks was something everyone agreed upon and reusing bricks is of course much better for the environment."*

*Building Project Manager Frank Christensen, Hanson & Knudsen*

## OUR BEER, OUR TOWN, OUR BRICKS – OUR FUTURE

A whole new part of Copenhagen is about to spring up in the area formerly owned by the Carlsberg brewery. Buildings will be renovated or torn down to be replaced by new ones. Preserving the area's history and a minimal environmental impact are key issues so reusing bricks to create beautiful buildings while saving CO2 at the same time is a natural choice. Old Clean Bricks ensures that all bricks are cleaned, history is preserved and the environment safeguarded.

## NEW EMBASSY IN COPENHAGEN

The final finishing touches in the renovation of a very special house in Hellerup, north of Copenhagen, are being put into place. Originally, the house was built using specially formed old bricks from Southern Jutland. When the building was to be renovated and extended, developer and owner chose to continue using the same bricks – Flensborgbricks. Approximately 60,000 of these Flensborgersten were used in the project. From 2010, the building will be home to the Australian embassy.

The total CO2 saved by using old bricks amounts to 30 tons.

# GREEN BUILDING WITH SOUL

In the Municipality of Odense, building projects have to be 'green'. So the Municipality chose Old Clean Bricks as supplier in Odense's Bjerregårdshaven project. The 74,000 bricks used on the facade give this residence for young people a very special appearance

**A UNIQUE BUILDING WITH GREEN SOLUTIONS.**

## BRICKS CUT TO 20 MM. SIZE

Levi Strauss asked us if we could supply old bricks as shells. They didn't want to give up too much of the floor space but wanted the special look and feeling that the old bricks give. We have now delivered to the first four stores across the Nordic region, the latest being on Copenhagen's main shopping street. Thanks to our Levi Strauss experience, we can now supply all bricks cut as shells.

## OLD CLEAN BRICKS

Old Clean Bricks is a green enterprise which is making a difference to the environment. Through a unique patented cleaning method, Old Clean Bricks enables construction waste to be reused. The old bricks are cleaned, stacked, and used in new building projects and renovations where the developer wants to eliminate unnecessary CO2 use or where a particular look is required with patina and character.

2000 cleaned bricks save 1 ton of CO2 being emitted into the environment.

Old Clean Bricks can supply all types of brick to suit a building's individual look and character.

Based in Svendborg, Old Clean Bricks can supply throughout the world.
